

UTILITY BARRIER

Ideal for a variety of utility works, the Utility Barrier is completely manufactured within the UK and its unique and protected D-Hinge™ system allows the barrier to be incredibly stable.

When used together, the Utility Barrier and D-Hinge™ can connect with existing metal gate systems, and other plastic barriers already on the market.

The upper area of the barrier has been designed with an increased area for highly reflective material, making the barrier fully equipped for the European market.

Meets the following Standards:

- Reflectivity requirements of BSEN12899-1
- Chapter 8 – The Traffic Signs Manual
- Traffic Signs Regulations & General Directions

Manufactured in the UK , 3 and 4 gate options available

Incredibly stable due to the D-Hinge™ (connects to existing barriers on the market) and D-Clip™ (connects one set to another or closes off a single set)

Facility for a 600 x 450 courtesy sign

Corporate branding can be embossed and added on the front and back

Compatible with other plastic barriers on the market

Highly reflective area

Deep channels to prevent collection of rainwater

Durable and lightweight
